

Zeon Chen Zhengzhong (陳政中)

Room 220, Madam S. H. Ho Hall, Chung Chi College,

Shatin, Hong Kong SAR, China

Phone: (+852) 64061561 Email: zhengzhongchen2@gmail.com

GitHub: <https://github.com/ChanChengChung>

LinkedIn: <https://www.linkedin.com/in/zhengzhong-chen-bbb764309/>

PERSONAL SKILLS

Technical Skills:

- **Programming:** Python, SQL, TypeScript, C++ **Tools:** PostgreSQL, Docker, GitHub, Google Colab
- **Data Analysis and Visualization:** Pandas, Numpy, Scipy, statsmodels Matplotlib
- **AI:** Machine Learning, Deep Learning (pytorch), RNN, Transformer

Relevant Certificates: Google Data Analytics Certificate, DeepLearning.AI Data Analytics Certificate

Language Skills: Mandarin (Native), Cantonese (Native), English (Proficient)

EDUCATION

The Chinese University of Hong Kong (CUHK)

BSc in Mathematics (Minor in Artificial Intelligence)

09/2023 – 06/2028 (Expected)

- **GPA:** 3.686/4.0
- **Stream:** Mathematics and Multidisciplinary Stream (Engineering and Computer Science Concentration)
- **Course Highlights:** data structures and applications, introduction to MATLAB computing, data analysis, linear algebra, mathematical analysis
- **Honors and Awards:** Dean's List (07/2024); Dean's List (07/2025); Chung Chi College Head List (04/2025); University Mathematics Scholarship (11/2025); Dr. Chao Yong Chi-hsing Scholarship in Mathematics (11/2025)
- **Extracurricular Experiences:** Led and organized 5+ cross-cultural programs and student events (**50–500+ participants**), including university outreach, cultural exchange, and community service initiatives, enhancing student engagement and cultural integration

ENTREPRENEURSHIP & WORKING EXPERIENCE

Zhu Liu Information Technology Co., Limited (Product Website: <https://www.novelflow.co/zh-cn/>)

Co-founder | AI Developer and Data Analyst

11/2024 – present

- **Company Overview**
 - Co-founded **Novelflow**, an AI startup company building a **structured content generation engine** that transforms abstract ideas into **long-form, production-ready narratives**, targeting content **entertainment scenarios** such as game storytelling and scriptwriting
 - Developed a **task-driven generation workflow** integrating **interactive outlining** and **model orchestration**, addressing key limitations of LLM-based writing tools in structure, controllability, and output consistency
- **Company Honors & Recognition**
 - Second Prize, 2026 RongPiao Cup High-Level Talent Innovation & Entrepreneurship Competition (Greater Bay Area Division)(Advanced to Finals) (link: https://www.sohu.com/a/995086537_121083739)
 - Featured in **NVIDIA Startup Showcase (Guangzhou)**
 - Selected for **HKSTP Ideation Program**
 - Selected for **CUHK PI-Centre (PILOTS Lite) Incubation Program**
 - Selected for **CUHK VCCE Mentorship Program**
 - Secured **130000+ HKD** in seed funding (estimated to secure **1650000 HKD** funding in late April)
- **Selected Projects & Contributions**
 1. Entrepreneurship Competition & Pitching Preparation
 2. AI Writing Platform (Core Product Development)

- Led frontend development using **React.js**, building a structured AI interaction interface aligned with the product's **hierarchical content generation workflow**
- Implemented 10+ modular components, including dynamic navigation, task progress tracking, and interactive content generation panels
- Developing **image upload functionality** to support multimodal input, enhancing user control in creative workflows
- Integrated frontend with **PostgreSQL** database and FastAPI backend framework to enable scalable and lightweight data storage for long-form content generation

3. Data-Driven Performance Analysis

- Analyzed user interaction and system performance data using **Python (Pandas, NumPy, SciPy)**
- Identified key performance bottlenecks; demonstrated that reducing page load time by **0.5 seconds** increased conversion rate by **8%**

QUANT INSIGHT EXPERIENCE

Optiver FutureFocus Program, Shanghai

06/2026

- Selected as 1 of the **30** elite students for the intensive Tech Track, programmed **the circuit breaker**, and **designed the system** of receiving exchange information, summarized it and update the orderbook
- Successfully competed in the **Day-5 Optibook Showdown**, engineering **risk control engines** and implemented **active arbitrage & passive market-making** trading algorithms for the trading bot, ranking **7th** of participants

QRT Live Trading Lab 2026, Hong Kong

05/2026

- Invited to the exclusive QRT Live Trading Lab, actively simulating **macro trading strategies** and **pricing complex instruments** using real-time data while networking with quantitative researchers and traders

RESEARCH EXPERIENCE

Research Assistant | CUHK, Supervisor: Dr. Wong Chak Fu Jeff

03/2026 – 06/2026

Project Theme: Reinforcement Learning

- Conducting research on mathematical foundations of **reinforcement learning**, bridging theory and practice through structured content and modern algorithmic coverage
- Implementing and optimizing RL algorithms including specific algorithms like **Q-learning**, **Policy Gradient** to demonstrate core theoretical concepts

Student Researcher | Nvidia Hong Kong, Supervisor: Dr. Ivan Au Yeung

05/2026 – 07/2026

Project Theme: HH-Former (a new LLM Transformer structure)

- Developing HH-Former, a novel Transformer architecture integrating **Hodgkin-Huxley dynamics** to theoretically counteract **token collapse** (Rigollet 2025) and ensure representational diversity
- Implementing dual-mode (**Continuous/Discrete**) ODE-based modules in **PyTorch**, optimizing inference latency via **fixed-step Euler unrolling** and **torch.compile** to bridge theory and scalable performance

LEADERSHIP

CUHK MATH0001 Course

Teaching Assistant

07/2026

- Designed and developed interactive **Python Google Colab exercises** covering **data preprocessing**, **linear/polynomial regressions**, and **naive Bayes classification methodologies**

2026 MCM/ICM Mathematics Modelling Competition

Team member

01/2026 – 02/2026

- Performed solar geometry and climate data analysis for COMAP ICM Problem E, demonstrating 25–30% cooling load reduction in retrofit scenarios and won the **S prize**
